

When you smell and feel this vitally alive soil you come closer to living in agricultural abundance!

Field Day

Want to see the results of a low cost, scalable regenerative agriculture method that will reverse soil damage and rapidly increase your farm's yields and profitability?

Join the Agricultural Abundance Program and RCS Australia to discover more about the innovation that uses a unique, patented process to deliver:

- **Accelerated carbon capture** and restoration of degraded soils
- Improved **nutrient availability** in soils (and therefore reduced inputs)
- VRM Biologik's world first **drought buffering** technology creating water production within your soils - even in times of zero rainfall

Participants will view production of HumiSoil® at Elmore Compost & Organics, visit treated paddocks to see use of this technology and hear about the beneficial outcomes in different farm environments.

RCS Australia will introduce you to how the Grazing for Profit™ principles help you to improve the health of your land, increase your profits, and build resilience of your operation. Explore alternate crops such as hemp with Western Murray Land Improvement Group and learn about the use of the above technology in the deep ripping trail ????? by ????

See how these approaches and results can be compounded by using the Agricultural Abundance Program methodology.

Date: Friday 24 June 2022

Time: 8:30 am to 4:00 pm

Location: Elmore, Victoria.
Please bring a chair, water, and sun protection.
